

Goal. Train people who can investigate a system, process a signal, recover a message, and explain why — on air-gapped hardware they own.

- Why now.** SDR and EW skills are usually split across siloed courses or cloud labs that fail offline.

- CORE DOJOS** 本道 · earn every belt

01 - WHITE
Intro to the Lab
Terminal, filesystem, first investigations on the Pi
12 ch · 2 mod

02 - YELLOW
Software Craft
Python, C/C++, GDB, CMake, Git as daily weapons
36 ch · 6 mod

03 - ORANGE
Systems Core
Processes, IPC, sockets, how machines run code
12 ch · 2 mod

04 - GREEN
DSP Foundations
Sampling, spectra, filters — math behind radio
18 ch · 3 mod

05 - BLUE
Radio Path
IQ, GNU Radio, BPSK/QPSK, pulse shaping, sync
36 ch · 6 mod

06 - PURPLE
RX & Security
Full receivers, protocol RE, SDR security CTF
18 ch · 3 mod

07 - BLACK
Capstone Blackout
End-to-end recovery when the signal fails
1 ch · finale

3 mod · unlock anytime

PRODUCT + EXAMPLE FLOW 体験

The diagram illustrates the progression from the initial interface to the challenge interface. It starts with a box labeled "UI - DOJO MAP" with an arrow pointing to a box labeled "DOJO MAP". From "DOJO MAP", an arrow points to a box labeled "CHALLENGE". The "CHALLENGE" box contains a screenshot of the challenge interface, which includes a "WHITE BELT" section with the text "Intro to the Lab", a "Raspberry Pi / Debian Orientation" section, and a "Find the Flag" section. The "Find the Flag" section contains the text "Find the flag in the /root directory" and "The flag is a string of 10 characters. It starts with 'PCTF' and ends with '2020'." The "CHALLENGE" box also includes a "Solve" section with the text "Solve the challenge" and a "Submit" button. The "CHALLENGE" box has an arrow pointing to a box labeled "EXAMPLE - FIND THE FLAG (WHITE BELT)".

Ask: endorse Pi SDR Academy as the standard offline systems→SDR training path — a durable asset that compounds every cohort, instead of one-off decks or Internet-bound labs.
